

The Warrington Pipeline

RECENTLY IN THE NEWS...

The Township was awarded a \$5.3 Million low-interest loan to fund the installation of filtration systems on Township-owned public wells contaminated by the Horsham Air Guard Station. The work will address the four (4) wells that tested below the EPA's Health Advisory Level of 70 parts per trillion for PFOA and PFOA. Additionally, the Township applied for a \$3 Million grant through the DCED to potentially supplement the cost for this project which could effectively reduce the amount of money we use from the PENNVEST Loan.

A MESSAGE FROM THE BILLING DIVISION

The Water and Sewer Department encountered unexpected and unavoidable manpower issues over the summer that impacted the timeliness of meter readings for quarterly water bills. The delay in readings ultimately delayed the issuance of quarterly bills by over a month. This delay also caused a number of quarterly bills to encompass a longer consumption time frame than a normal quarterly bill. For more information regarding the issue and the solution the Department is taking to rectify the actions please click ***here***.

Information on our website

If you have not yet checked out the WTWSD web page you could be missing out on some important information. The following are some forms/ information:

- Public notices
- Conservation Tips
- How to pay your bill
- Direct Debt Authorization Form
- How to read your bill
- Water Rates
- Water Quality Reports

...and much more. Be sure to visit the Department's page.

Have you signed up for Notify?

Warrington Township has partnered with GeoDecisions to use their “Notify” system which provides mass notifications to registered users. Please find the form on our website, under the “how do I” tab and submit to the Township to register to receive notifications.

Winterizing Tips

If you plan to be away for an extended period over the winter, please make sure the temperature does not go below freezing in your home to prevent pipes from bursting. A broken pipe or meter due to freezing can incur a significant costly repair.

Plumbing and meters located against exterior walls, in unheated basements and crawl spaces are particularly vulnerable to the cold and can easily freeze in below freezing temperatures. This is also true for your water meter.

To avoid costly hazards, we suggest the following:

Eliminate Drafts

- Close crawl spaces, vents and doors
- Repair broken or cracked basement windows

Insulate Pipes

- Be sure pipes in unheated parts of your home, including crawl spaces, are protected from the cold
- Use properly applied heat tape or pipe insulation

Remove all hoses from outside faucets and shut them off from the inside. Leave the fixtures open to drain.

Secure and drain all underground lawn sprinkler systems.

Communities Presentations

Warrington Township hosted four 2nd grade classes from Titus Elementary school. The purpose of the day was to give the children the opportunity to better understand the roles of important figures in their community and to see where and how some of the community problem-solving is accomplished.

The Water and Sewer Department gave a brief presentation of what the department does for their community and how water enters and leaves their homes.
